## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-27, drawn to a syringe connector system, classified in class 604, subclass 187.
  - II. Claims 28-51, 53-56 and 59-90, drawn to a connector, classified in class 403, subclass 345.
  - III. Claim 52, drawn to an injector system, classified in class 604, subclass 131.
  - IV. Claims 57-58, drawn to a method of fabricating a connector, classified in class264, subclass 239.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system does not require a port (claims 28, 44, 53, 79), a plurality of resilient extending arms (claim 46), a forward and rearward portion (claims 61 and 66), an indicator (claim 72), a radially outward extending flange (claim 81), a slidable collet (claim 84) and a pitched flange (claim 86). The subcombination has separate utility such as a garden hose attachment.

Art Unit: 3763

3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as

Page 3

subcombination has separate utility such as a syringe not requiring a drive member.

claimed because the system does not require a radially inward threaded portion. The

- 4. Inventions I and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the connector can be made in parts instead of integrally.
- 5. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the injector system does not require the specifics of the connector shown above. The subcombination has separate utility such as a garden hose attachment.
- 6. Inventions II and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be

Art Unit: 3763

made by another and materially different process (MPEP § 806.05(f)). In the instant case the connector can be made in parts instead of integrally.

- 7. Inventions III and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the connector in the injector system can be made in parts instead of integrally.
- 8. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 9. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I as drawn to Figure 3A.

Species II as drawn to Figure 4A.

Species III as drawn to Figure 5A.

Species IV as drawn to Figure 6A.

Species V as drawn to Figure 7A.

Species VI as drawn to Figure 8A.

Species VII as drawn to Figure 9A.

Species VIII as drawn to Figure 10.

Species IX as drawn to Figure 11A.

Species X as drawn to Figure 12A.

Art Unit: 3763

Species XI as drawn to Figure 13.

Species XII as drawn to Figure 14.

Species XIII as drawn to Figure 15.

Species XIV as drawn to Figure 16.

Species XV as drawn to Figure 17.

Species XVI as drawn to Figure 18.

Species XVII as drawn to Figure 19.

Species XVIII as drawn to Figure 20.

Species XIX as drawn to Figure 21.

Species XX as drawn to Figure 22.

Species XXI as drawn to Figure 23 A.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 3763

809.02(a).

the election, applicant must indicate which are readable upon the elected species. MPEP §

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark K Han whose telephone number is 703-308-4543. The examiner can normally be reached on Monday to Friday, 9 am to 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on 703-308-3552. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Art Unit: 3763

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0858.
